

Brian Pickard, Rhodes, Iowa - Case IH Steiger 385

"After having AgroEcoPower tune our Case IH tractor, we are using 2 gallons per hour less fuel and can go even in those spots where water stood without slowing down. I am impressed."

Alex Recker, Arlington, Iowa - John Deere S680

"In fuel savings alone, it will pay for the tune in about 250 hours. That does not include less man-hours per acre and more acres covered per hour. Nice product, very well done."

Paul Enhle, Kewanee, Illinois - Case IH Magnum 340

"Once we got the combine done and visited with AEP, we realized it was not only tuning it up, but it was the increased torque too. And a lot of it! And all our tuned tractors act clearly different than they did before. We have had 12 units tuned by AEP and are not disappointed with one of them."

Steve Hawthorn, Dayton, Ohio - Case IH Magnum 190

"Adding 40 HP is a significant difference for my tractor, Just as I would have 2 tractors in one. Installation on site, I didn't have to go anywhere. I am excited."

Chad Jadee, Midland, MI - John Deere S650

"Consumption is money that I have to keep an eye on at rising prices. Tune is paid for about 250 engine hours, which is one season for me. Constant and higher speed with more acres per hour and less fuel. No brainer."

Charlie Sifford, Linden, IN - Case IH Quadrac 500

"Converting the 500 to 620 was a must-have solution in our conditions. Speed-planting is a trend nowadays and our tractor lacked enough power. After the modification, we can use the full potential of the engine. We have already 5 tunes and we are extremely satisfied."
