

# What Happens During Performance Modification

**AGROECOPOWER**

**1**

## **Discuss Your Needs**

AgroEcoPower technicians will come to you and will discuss your needs and expectations.

**2**

## **Diagnostics**

Diagnostic and software backup procedures are run before software modification is performed. Control unit modification can be reversed at any time.

**3**

## **Install New Software**

New software solution is prepared individually for the selected equipment/vehicle and is installed into the control unit.

**4**

## **Power Measurement**

Diagnostic and power measurement procedures are run. Before the delivery, AEP performs a test drive and stands behind the software modification as long as you own it.
